

Silt Sock is a polypropylene mesh sock filled with wood chips.

It is a low maintenance, reusable, environmentally friendly product used for erosion control on job sites.

Filled socks may be used as an alternative to silt fence in many areas, the sock has a lower profile making your project more aesthetically pleasing & easier to access.

Silt Sock traps sediment while allowing water to filter through. The design of the sock provides close contact with the ground preventing water from flowing underneath.

Size	Quantity	Wood Stakes
8" (200mm)	60 m/pallet	25 x 2' wood stake
